Remember, what's in the double curly brackets {{ is to create a field you understand and can link to the data you want configured. Keep the text in the brackets the same to use the same data multiple times (for example, the name). Differentiate the text in the brackets to create different fields to map data to.

What's the merge field?	What does it do?	What does it look like?
Student Name	Puts student first and last name on the document.	Alita Clark
Student ID	Puts the student ID type you identify into the document. (Useful for ingesting documents into certain communications systems.)	12345678
